M5Stamp unimplemented version

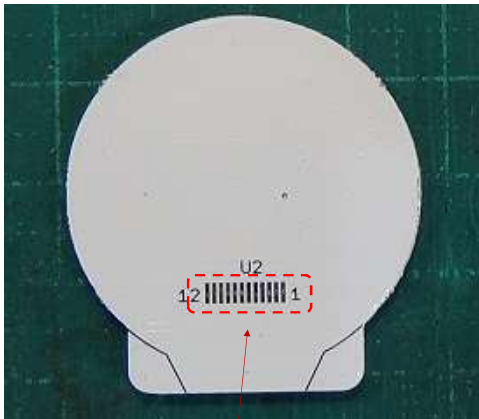

M5Stamp implementation version

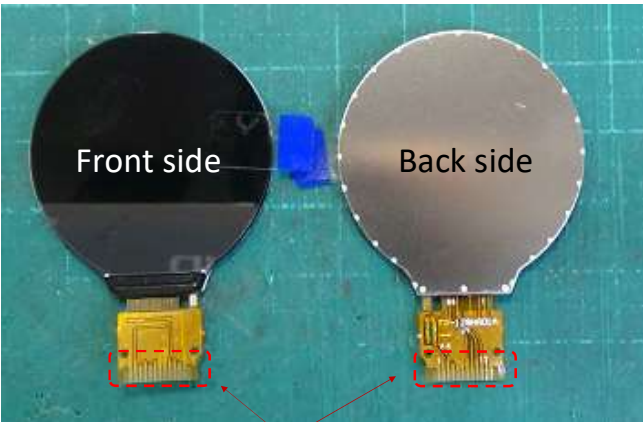

# Round LCD implementation

Back side of board

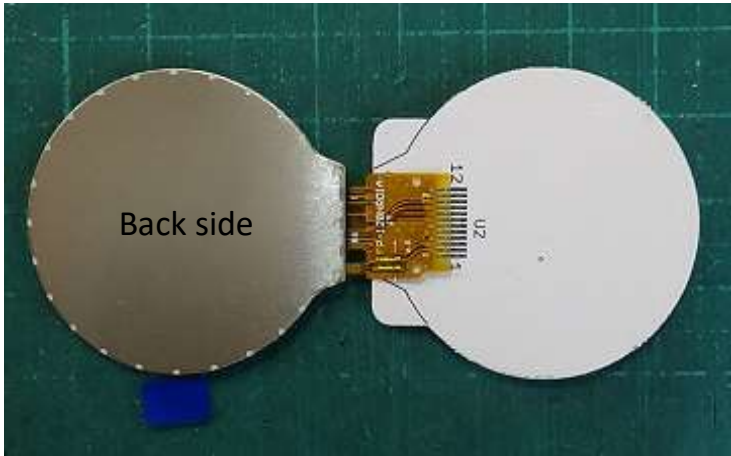

Apply flux in advance

Round LCD front and back

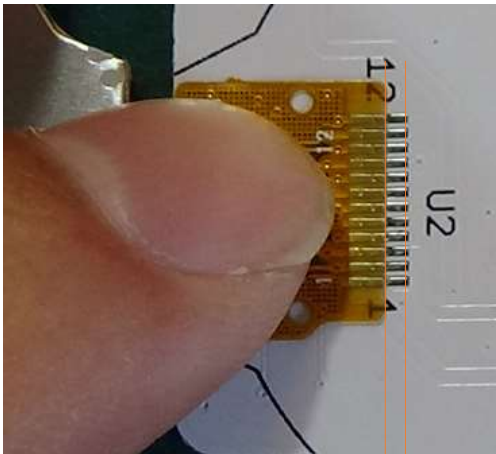

Apply flux in advance

Soldering round LCD

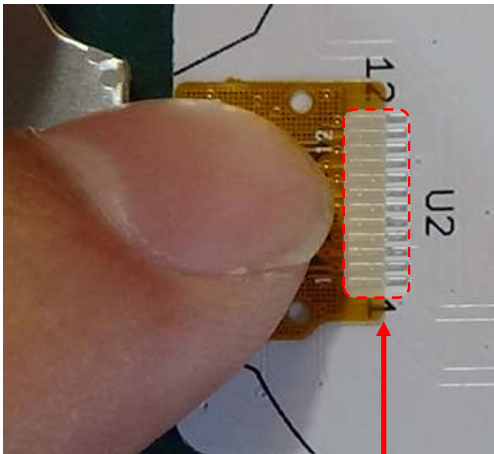

The round LCD must be placed back side; it will not work in reverse.

Align the FPC and land pattern straight and solder in several places.

Aligning the positions initially is important, as it will be troublesome to correct them later.

Furthermore, perform the final soldering

Leave a gap of about 2mm

Be sure to apply insulating tape to the soldered parts.
